

*The twelfth edition of Progetto Fuoco,  
the biennial international exhibition of plant and equipment  
for the production of heat and energy from the combustion of wood,  
is scheduled in February 2020 in the Verona Exhibition Center*

### **Progetto Fuoco 2020. An increasingly international event**

Progetto Fuoco is the biggest exhibition in the world dedicated to the world of heating and energy from firewood. An even more international character will boost the next 12th edition, scheduled at Verona Exhibition Center on February 19 to 22, 2020. This was confirmed by Raul Barbieri, CEO of Piemmeti Spa, the Veronafiere Company that organizes Progetto Fuoco: "*Since the end of the last 2018 edition, we have boosted a strong promotion for the incoming of qualified delegations of foreign operators at the next exhibition, inviting them also from new and emerging markets*".

Increasing attention to foreign countries also translates into an increased number of exhibitors. The next Progetto Fuoco 2020 will count on the expansion of the exhibition space - 8 halls in addition to the outdoor areas - for an event that is becoming more and more unmissable for sector operators.

The world production's elite will offer the entire range of equipment, systems and products during the four days of the exhibition: from fireplaces to wood and pellet stoves, from wood-burning kitchens, to thermal cookers, from pellets to products for cleaning, from multi-fuel boilers to storage silos, from log splitters to flue accessories.

The numbers of the last edition confirm the constant growth of Progetto Fuoco: **782 exhibitors, of which 322 are foreign exhibitors, 115.000 m2 of exhibiting area, 72.000 visitors of which 16.000 from abroad.**

**Febbraio/February 2020**

The exhibitors of this **International Exhibition of plants and equipment for the production of heat and energy from wood combustion** are well aware that they will meet operators from all over the world and will have a visibility that is difficult to find elsewhere. They will also have the chance to contact study and design centers for new technologies applied to the facilities, from domestic to industrial ones.

Piemmeti SpA and the technical sponsor AIEL are setting the program of conferences, workshops and technical meetings with the collaboration of the University of Padua, other University Institutes and the most important trade associations.

To better characterize the domains of use and the advantages of wood-based biofuels heating, Progetto Fuoco features three theme areas: **Project Wood** (the mechanization of the wood supply chain), **EcoHouse** (energy efficiency building) and **GiveMeFire** (the Innovation Village with the exhibition of start-up companies with the most important technological innovations for the sector).

By promoting the use of wood, Progetto Fuoco contributes to the dissemination of correct information and core concepts of which consumers are not yet aware: saving and reducing consumption, the possibility of accessing government incentives, safety and sustainability to reduce fossil fuel pollution and protect Italian forests.
